

Return to Driving is addressed with individuals and families through the use of a thorough, standardized occupational therapy assessment (“OT DORA” / “OT Driver off Road Assessment Battery”). This is an assessment of cognitive, perceptual, behavioral, and sensory skills and abilities related to driving, prior to participating in an on-the-road driver evaluation; Services include opportunities for active passenger / navigation activities to increase preparedness for safe return to driving. Additionally, we can assist to coordinate with local service providers for driver simulation assessment and for formal behind the wheel driver evaluation and training.

(Resources listed alphabetically)
